

GigaCloud® v9.2

Information and Known Issues

July 2019

General Information

- | | |
|------------------------------------|--|
| Supported Operating Systems |  GTEP is a server product that is supported on:
Microsoft Windows Server 2012 R2
Microsoft Windows Server 2016
Microsoft Windows Server 2019
Requires .NET 4.6.2 installed.
Note: AD Sync Agent and RMS Connector both support installation on Microsoft Windows Server 2016.
SQL Server 2005/2008/2012/2014/2016/2019 |
| Language Support |  The Client Interface supports English-US. For any other languages, English is automatically set as the default overriding the machine default language. (009313)
GTEP Help is currently available only in English.
GTEPEXT and Help file support English EN and Chinese ZH.
AD Sync Agent Help file is provided in English EN and Chinese ZH versions.
AD Sync Agent supports English EN and Chinese ZH.
AD RMS Connector currently supports English (EN) only. |
| Desktop Client Support |  GigaTrust Desktop Client/Receiver v8.7 and Consume-Only Client v9.0 are supported by GTEP v7.4 up to GTEP v8.2.
GigaTrust Desktop Client v10 and higher requires GTEP 8.1 or higher.
Data Overwatch is only supported by GTDC v10.3 or higher.
Content Classification is only supported by GTDC v10.4. As of GTDC v11.3.93
Content Classification is by default turned off in the client with the following registry setting: EnableClassification [Y/N]. |
| Mobile Client Support |  For Auto-configure to work GTMail v4.2 and GigaCloud iOS v4.6 or higher are required.

 GTMail v4.2 or higher supports Data Overwatch and blocks/reports device screen captures. GigaCloud iOS v4.6 supports Data Overwatch and reports device screen captures but cannot block them. |
| AD RMS Connector |  GigaCloud AD RMS Connector requires the GigaCloud AD Sync Agent to be installed in the same Enterprise environment to work as designed. |

- Miscellaneous**
-  Administration UI supported browsers: Microsoft Internet Explorer v11 and Edge, Google Chrome and Mozilla Firefox. Internet Explorer v8, 9 and 10 are no longer supported. (21698)
 -  GTEP Help supported browsers: Mozilla Firefox 4+, Chrome 9+, Microsoft Internet Explorer 9+ and Microsoft Edge.
 -  GigaCloud File Folders support is for DFF v8.0 or higher. GigaCloud does not officially support GTFF v7.0.
 -  Parent/Child configuration is no longer supported in GigaCloud version.
 -  A cluster password is no longer required to un-join a GTEP node from a cluster configuration. (20989)
 -  All management of enterprise templates must be done via GTEP. Templates can be synchronized with RMS if changes are made to RMS templates through the ADRMS Administrative Tool. Additionally, to have updated templates pushed out to users, the changes must be made using GTEP. (15148)
 -  GTEP does not use SCP. GTEP determines RMS via the database.
 -  Managed Users / SharePoint:
GTEP Managed users can use SharePoint protected libraries, but some configuration is required.
The GTEP Managed community must be configured with the option to Encrypt Passwords unchecked.
After the GTEP Managed user account is created, SharePoint needs to grant permission to the site / library. Currently GTEP creates Managed accounts with a setting that prevents SharePoint Search for those users. To remedy this, the following must be done on a per user basis:
 1. Access the Active Directory console on your Domain Controller (if you have more than one, go to your primary to avoid synchronization conflicts).
 2. Enable Advanced Features/Mode.
 3. For any user account that is not returned in a SharePoint search, right-click the account listing and then select Properties.
 4. Next, select the Security tab. Locate the entry for 'Authenticated Users' and select it. Grant the Read permission.

Known Issues

- General**
-  GTEP components cannot be added using the installer Change feature. Repair installer functionality will also fail. The software must be uninstalled and reinstalled from the backup with the new feature(s) selected.

Administration

- Cloud Administration, Organization**
-  Email Properties: Edit is not disabled for Users without Write permission. (16290)
 -  In Default Tenant Settings and Tenant Settings > Email Templates on Preview of an Email template embedded images will be missing because in the image file path there is an un-replaced token. (22752)
- Groups**
-  Groups may not currently be added in the Organization>Groups page when the group names include the following characters: “, \# + < > ; =” (24403)
- Tenants**
-  If a blacklist is created on the root and assigned to a Tenant it will not be displayed to the Tenant Administrator in the Policy Tree on either the Assign or Manage pages. (23780)

-  Currently the server will append the Template Descriptor name with a "_" and the Tenant Name. If the total length is over 200 characters a database error will be thrown. (23658)

Policy  GTEP does not support the use of the Active Directory Domain Users Directory container in the Directory tree. (15922)

-  If using the RMS Connector and a template is modified with "Use license must be renewed at every access" checked, the changed rights/principals may not be immediately pushed out to the clients using Microsoft native or using GigaTrust Desktop Client software. There may be a delay up to 15 minutes. (24151)
