Introduction

GigaCloud Administration includes a comprehensive reporting component, allowing customized reporting and targeted data analytics.

GigaCloud reports are listed under **Reports** in the menu. Using these reports, you can generate usage information such as the number of documents that have been protected by a User, or the number of end-user licenses that have been requested for a document and by whom.

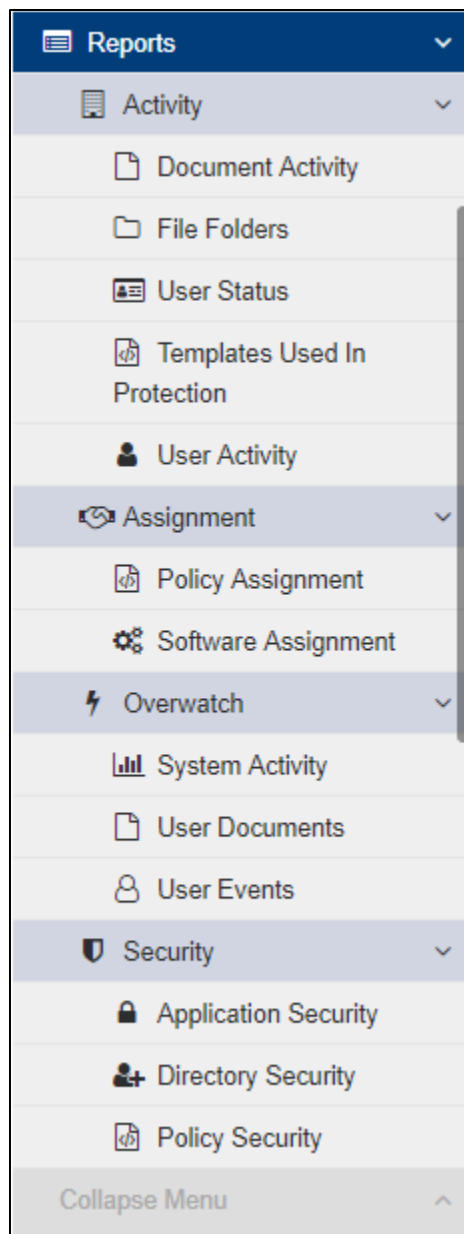

GigaCloud Reporting allows a Tenant Administrator to:

- 🕒 Run real-time access reports for Document and User Activity, Assignments and Permissions and Security.
- 🕒 Reports can be drilled down to more detailed reports to mine the specific data you need to analyze.
- 🕒 Allows auditing of Users for potential Security breaches.
- 🕒 Reports can be customized and exported in Excel, PDF and Word formats.

Overview

Reporting is located on the bottom of the menu tree in GigaCloud Administration. Reports are divided into the following four groups and respective subgroups:

1. **Activity** – Reports document, User and Rights Management activity in your AD RMS environment.
 - a. **Document Activity** – This report lists all protected documents and emails.
 - b. **Managed User Status** – This report displays the status of Managed Users.
 - c. **File Folders** – This report displays all event activities that occur in GigaTrust File Folders.
 - d. **Templates Used In Production** – This report displays All Templates (Enterprise-level and User-created) with Template Descriptions used by AD RMS Users.
 - e. **User Activity** – This report displays authenticated User Activity.
2. **Assignment** – Run metrics on Rights Management Policies and Managed User Software Types and Software Versions.
 - a. **Policy Assignment** – This report will show which Users, Groups and Communities are assigned to which policies.
 - b. **Software Assignment** – Run this report to return the current Software Type and Software Version for Managed Users.
3. **Overwatch** – Security Reports allow you to get a snapshot of which Users in your organization have permissions for all components and Rights Management Policies through GTEP.
 - a. **System Activity** – This report displays ALL User Document activity by Overwatch Event type.
 - b. **User Documents** – Run this report to display displays specific User activity by Document name and by Event type: Protect, File Unprotect, Unauthorized Open, Changes Protection, Open, Revoke, Print and Screenshot.
 - c. **User Events** – This report provides a data rich report with Timestamp, Overwatch Event, User Name and Document Name.

4. **Security** – Security Reports allow you to get a snapshot of which Users in your organization have permissions for all components and Rights Management Policies through GTEP.
 - a. **Application Security** – This report shows all major areas of GTEP and the permissions for each User.
 - b. **Directory Security** – Run this report to display Users with access to the Directory node.
 - c. **Policy Security** – This report shows which Users have permissions for your Policies.

Run a Report:

Click the name of the report you want to generate. Reports that allow for filtering will present selection criteria in the main report panel. After selecting the criteria for the report, press the **Run** button to generate the report.

Export a Report:

Click the **Export** button and select the exported file format after executing a report. Reports can be exported in Excel, PDF, or Word format.

Print a Report:

Click the **Print** button to print the current report.

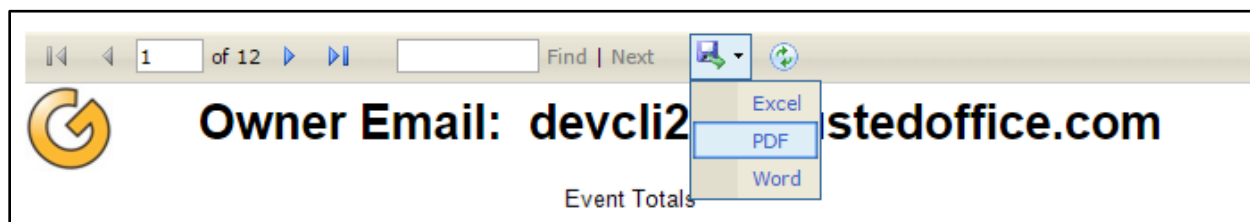

Paging Through a Report:

Paging buttons are located at the top and bottom of each report to allow moving to the First, Previous, Next, or Last page. Also, a page number can be entered to move to a specific page of the report.

Sorting Report Information:

Some reports can be sorted by clicking the heading of the column you want to use for sorting. A triangle appears to the right of the column heading text to indicate the sort order. Clicking the column toggles the sort order between ascending and descending order. The sort is applied to the current page.

All reports have an interactive tool bar at the top and allow you to do the following:

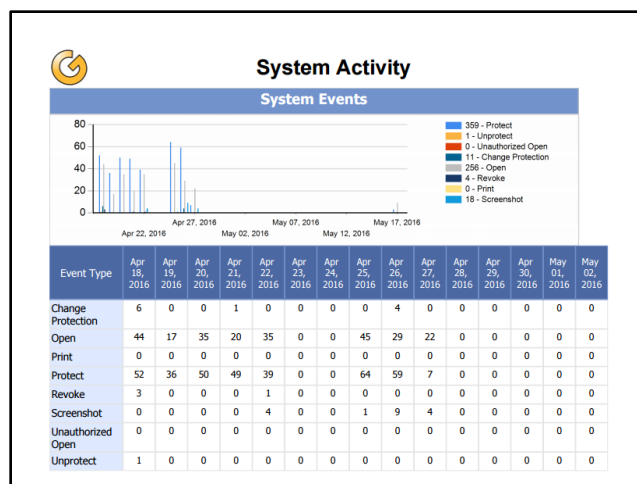

- You can move page forward/back by using the arrow icons on the left-hand side.
- If you want to go to a specific page number, enter it in the text box and select **Find**.

- If you select the **Save** icon, in the drop down you can choose to **Export** the report in **Excel**, **PDF** or in **Word** format. The selected format will be downloaded to your browser.

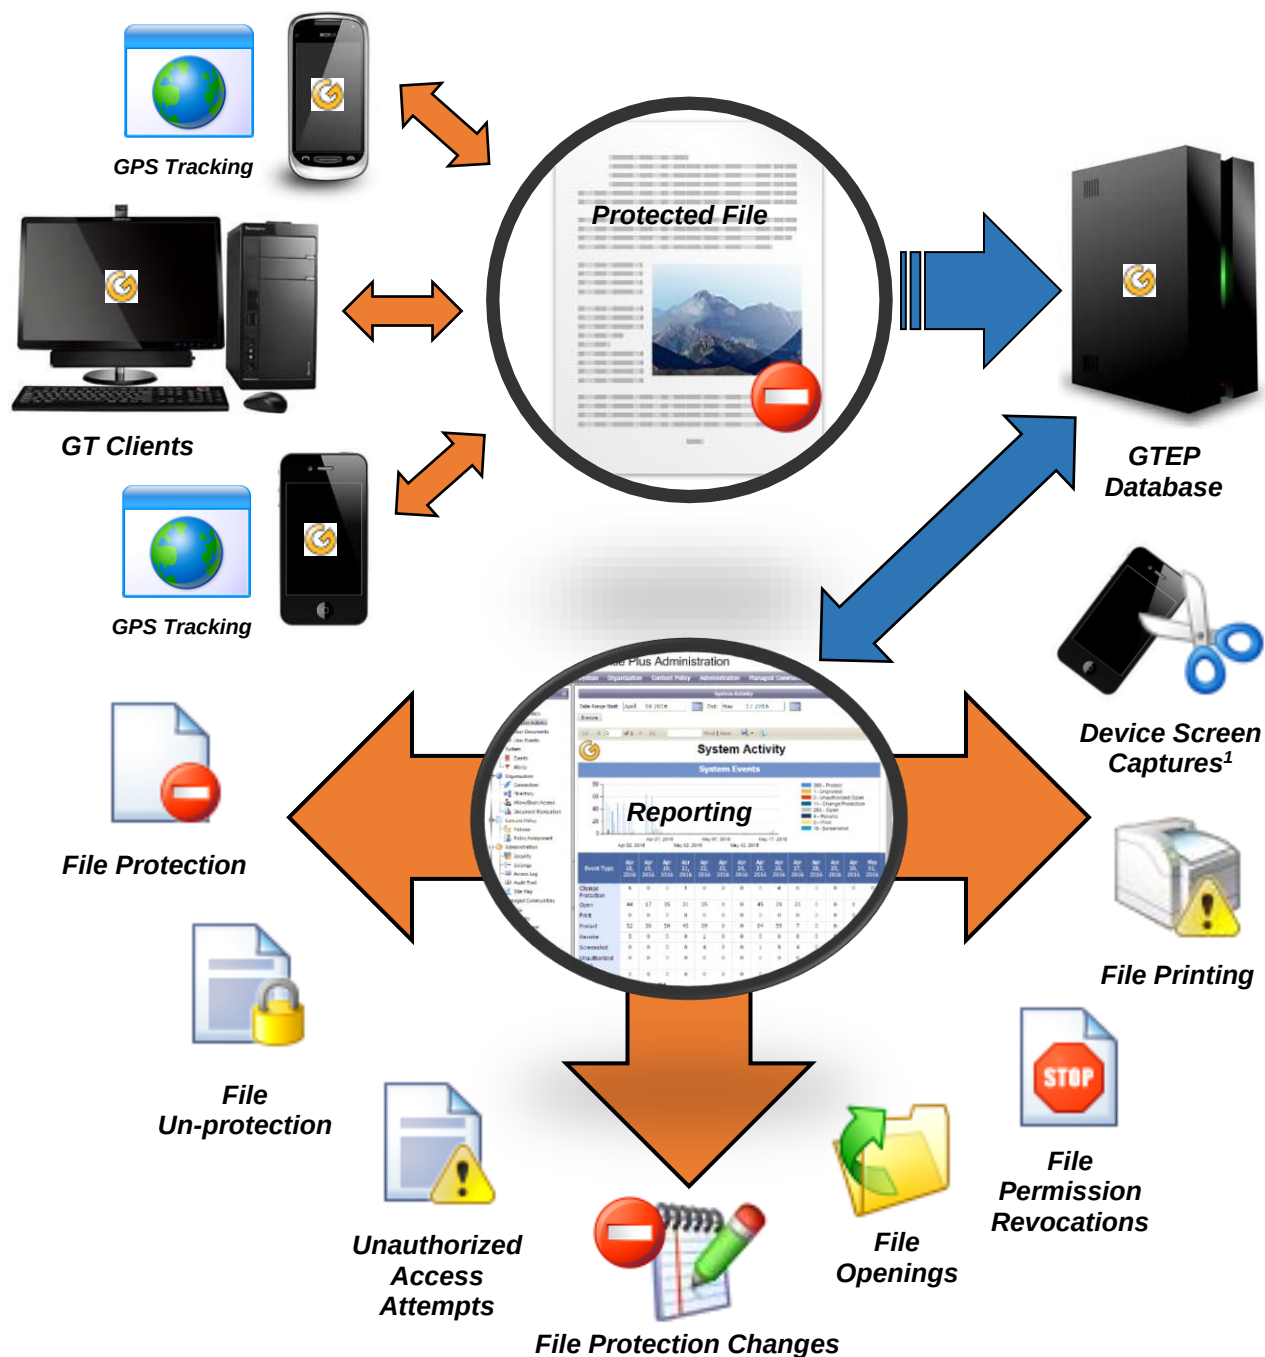

- To **Refresh** the report, click on the far-right icon.

Note: Leaving **All** selected will return all results for that sub category. In any text field an (*) asterisk can be used as a wildcard character. For example, “user*” will return all results that begin with “user”, or “*user” will return all entries that end with “user”.

Data Overwatch

GigaTrust Data Overwatch records Access of Protected File, File Protection, File Unprotection, Unauthorized Access Attempts, File Protection Changes, File Permission Revocations, File Printing, GPS Tracking and Device Screen Captures. The following chart shows the interaction between devices, documents and reporting. Not all Client Software captures all events; refer to GigaCloud Client documentation for details.

Data Overwatch Configuration

Home > Administration > Application Settings

APPLICATION SETTINGS | *customize application settings for GigaCloud*

[Edit](#) [Refresh](#)

Name	Value
Activity Log Retention Period (months)	26

Captcha Private Key	6LRk3hQUAAAAABcOBf6xPGnUN_IRYtWhLkV89B1
Captcha Public Key	6LRk3hQUAAAAAGdFoP-ifz6TzExLTIf-96J8zE7G
Cluster Friendly Name	testcloud
Content Classification Property Name	Classification
Default Tenant User Limit	25
Disable auto set of Allow Macros checkbox in template editor	0
Enable Mobile Auto Configuration Button	1
Enable Overwatch	1
Enable Trials	0
Event Retention Period (days)	90
GTDC - Notify Password Change (days)	14
GTEP Server Address	https://testcloud.trustedoffice.net
Lockout Duration (minutes)	10
Maximum Concurrent Policy Updates (clients)	20
Maximum Password Attempts	5
Mobile GPS Coordinates Required for Overwatch	1
Overwatch Retention Period (days)	90
Policy Polling Interval (seconds)	50
Policy Polling Interval on Failure (seconds)	30

The settings circled in red above are described in detail below:

Disable auto set of Allow Macros checkbox in template editor

Configuring GTEP to enable Data Overwatch for GigaTrust Desktop Clients requires the Global setting **"Disable auto set of Allow Macros checkbox in template editor"** in **Administration > Application Settings** to be set to 0. By default this setting does not need to be modified.

Enable Overwatch

By default, Data Overwatch is enabled and this setting is set to 1. If you need to disable Data Overwatch set it to 0.

Mobile GPS Coordinates Required for Overwatch

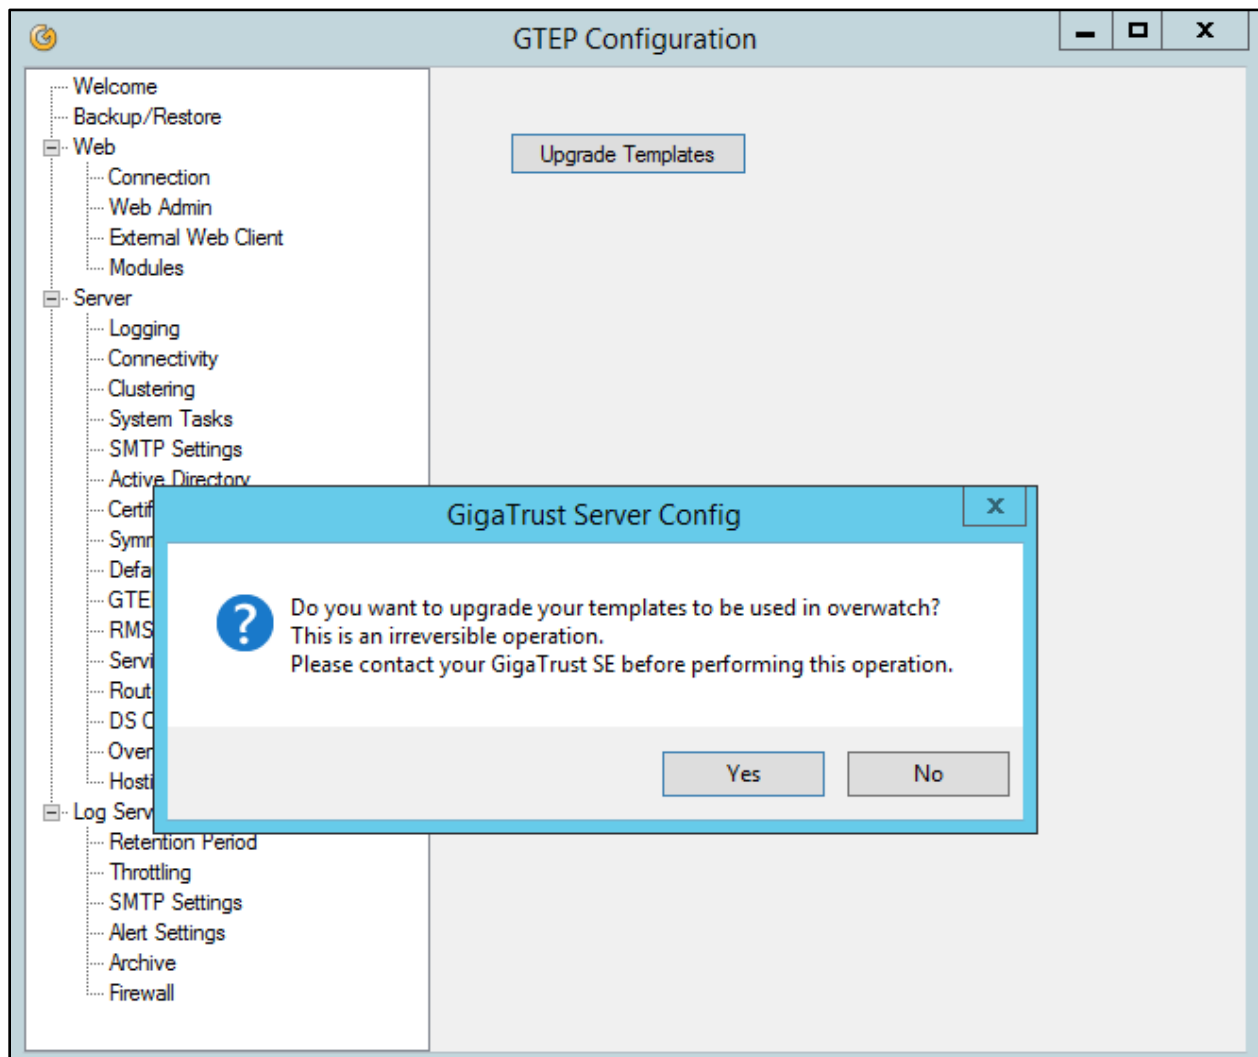

This setting will require mobile devices to report Latitude and Longitude coordinates from Overwatch events. All Mobil Users will be prompted on activation of GigaCloud service to accept the sharing of their GPS coordinates. If they fail to accept the recording of event locations, the GigaCloud mobile app will not install. By default this setting is set to "0" (turned off.)

Overwatch Retention Period (days)

You can optionally change the setting: **Overwatch Retention Period (days)**. This setting controls how long GTEP retains Data Overwatch events in the database for reporting. Default is 90 days.

Note: Data Overwatch requires the Client apps to support this feature. Currently GTDC v10.3 and higher and iOS Client v4.1 support Data Overwatch.

Whenever the “**Disable auto set of Allow Macros checkbox in template editor**” setting is changed, it will be necessary to upgrade templates used in Overwatch. Open the **GTEP Configuration Tool** from the server Start Menu, or Programs list, and select the **Server > Overwatch** node as displayed in the above screen shot.

Click **Upgrade Templates** and confirm your selection on the confirmation window.

This updates the **Allow Macros** setting in ALL Policy Templates as shown in screen shot below (either enabling or disabling as selected in the “**Disable auto set of Allow Macros checkbox in template editor**” setting).

 **Users and Groups** - *give users and groups rights to this template*

Reporting - Activity

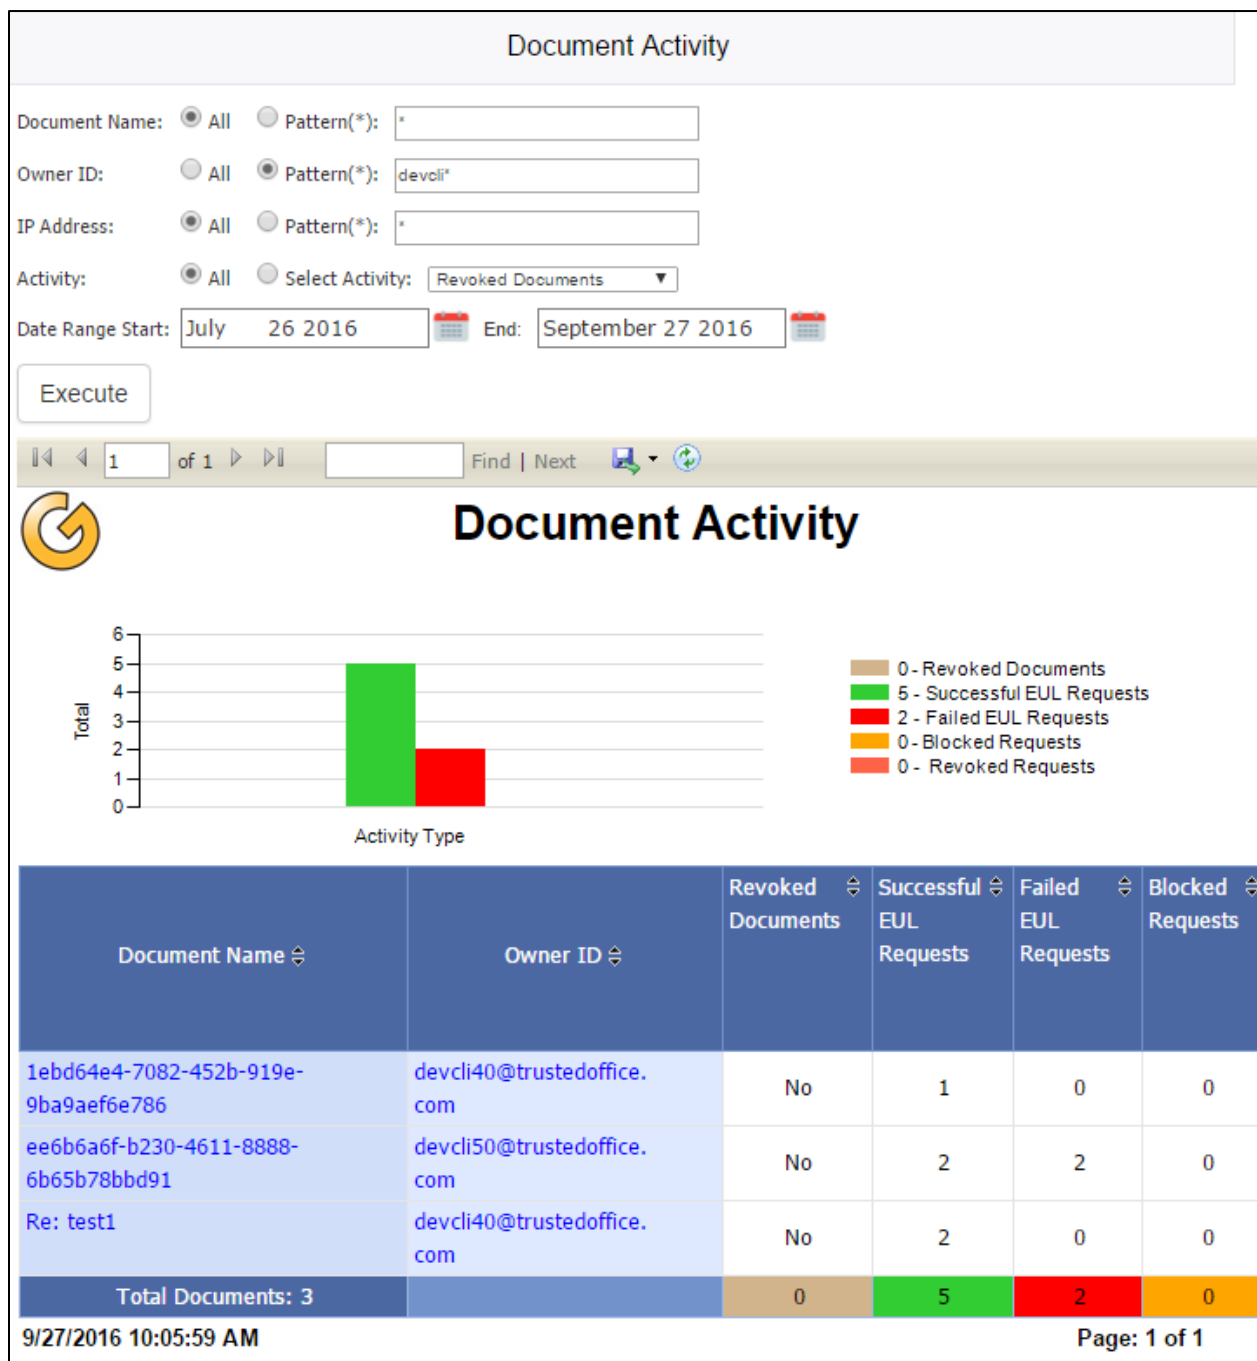

Overview

Activity reporting returns activity statistics by User (email address) and documents, Users and Templates in your AD RMS environment.

- **Document Activity** – This report displays ALL User document activity by event type.
- **Managed User Status** – Run this report to list User details per Managed Community such as the User's current Status and the Active Directory location of that User.
- **File Folders** – This report displays all event activities that occur in GigaTrust Dynamic File Folders.
- **Templates Used In Production** – Run this report to provide metrics on policy templates used by your organization such as what content was protected by each Template and further details by: **Revoked Documents, Successful EUL Requests, Failed EUL Requests, Blocked Requests** and **Revoked Requests**.
- **User Activity** – This report provides metrics by User such as what content was protected and further details by: **Revoked Documents, Successful EUL Requests, Failed EUL Requests, Blocked Requests** and **Revoked Requests**.

Document Activity Report

This report displays ALL User document activity by Document Name, Owner ID and Activity type: **Revoked Documents, Successful EUL Requests, Failed EUL Requests, Blocked Requests and Revoked Requests.**

Customize your report with the following:

- **Document Name** – The name of the Document for which you would like to view User activity.

- **Owner ID** – The User Name of the principle owner of the document.
- **IP Address** – The IP address for the Document Activity.
- **Activity** – The type of Activity such as: **Revoked Documents**, **Successful EUL Requests**, **Failed EUL Requests**, **Blocked Requests** and **Revoked Requests**.
- **Date Range Start / End**– Select an optional date range.

Clicking on a **Document Name** will drill down into the **Detail Document Activity** report. This report details all document activity broken down by User and the following Activities: **Successful EUL Requests**, **Failed EUL Requests**, **Blocked Requests** and **Revoked Requests**.

Total External Users: 3		

9/27/2016 11:36:42 AM
Page: 1 of 1

Customize your report with the following:

- **User ID** – Select ALL users or drill down by a specific User or a group of similarly named Users.
- **Status** – This will provide the following options: **Date Invited**, **Date Activated**, and **Date Deactivated** for the respective User.
- **Directory Path** – This is the location of the User in Active Directory.

Note: Selecting an Owner ID will drill down to the [Detail User Activity](#) report as previously explained on page 11. This report details all document activity by the User.

File Folders Report

This report lists all files protected by GigaTrust Dynamic File Folders, and if consumed, provides a link to drill-down into reports that display end-user access.

The screenshot shows the GigaCloud interface for the File Folders Report. At the top, there is a breadcrumb trail: Home > Reports > Activity > File Folders. Below this, the title 'FILE FOLDERS' is displayed in large blue letters, followed by a link 'view file folders activity in GigaCloud' in orange. A 'Filter' section is visible, containing a 'Date Range' dropdown set to '05/15/2018 - 05/21/2018' and a blue 'Run' button. Below the filter, a pagination bar shows '1 of 12' and a 'Find | Next' button. The main title 'File Folders Report' is centered above a table. The table has four columns: Date, Event, Status, and Description. It contains three rows of data, all showing 'Protection' events with 'Information' status, detailing file protection for 'Sample PDF 1' files.

Date	Event	Status	Description
5/21/2018 12:54 PM	Protection	Information	File Protected 'C:\DFF\Dest7\Sample PDF 1 021.ppdf'
5/21/2018 12:53 PM	Protection	Information	File Protected 'C:\DFF\Dest7\Sample PDF 1 022.ppdf'
5/21/2018 12:49 PM	Protection	Information	File Protected 'C:\DFF\Dest7\Sample PDF 1 005.ppdf'

Customize your report with the following:

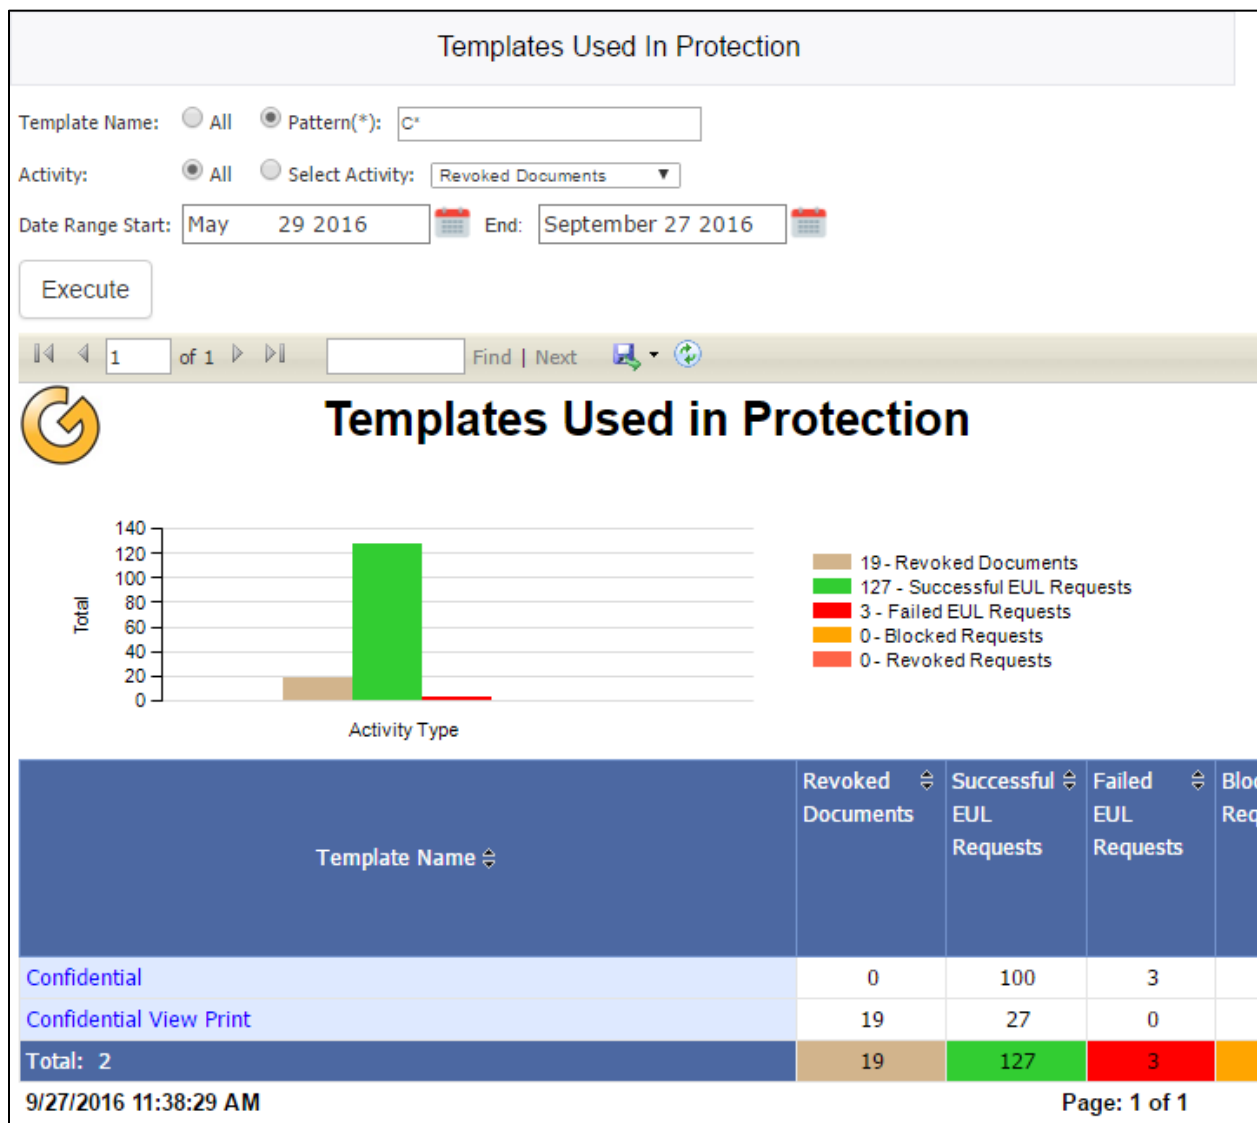

- **Date Range** - is the only the criteria for this report.

Report details include **File Name**, **Date Protected**, **Creation Date**, **Modified Date**, **Owner** and **File Path**.

Note: Selecting an Owner ID will drill down to the [Detail User Activity](#) report as previously explained on page 9. This report details all document activity by the User.

Templates Used In Production Report

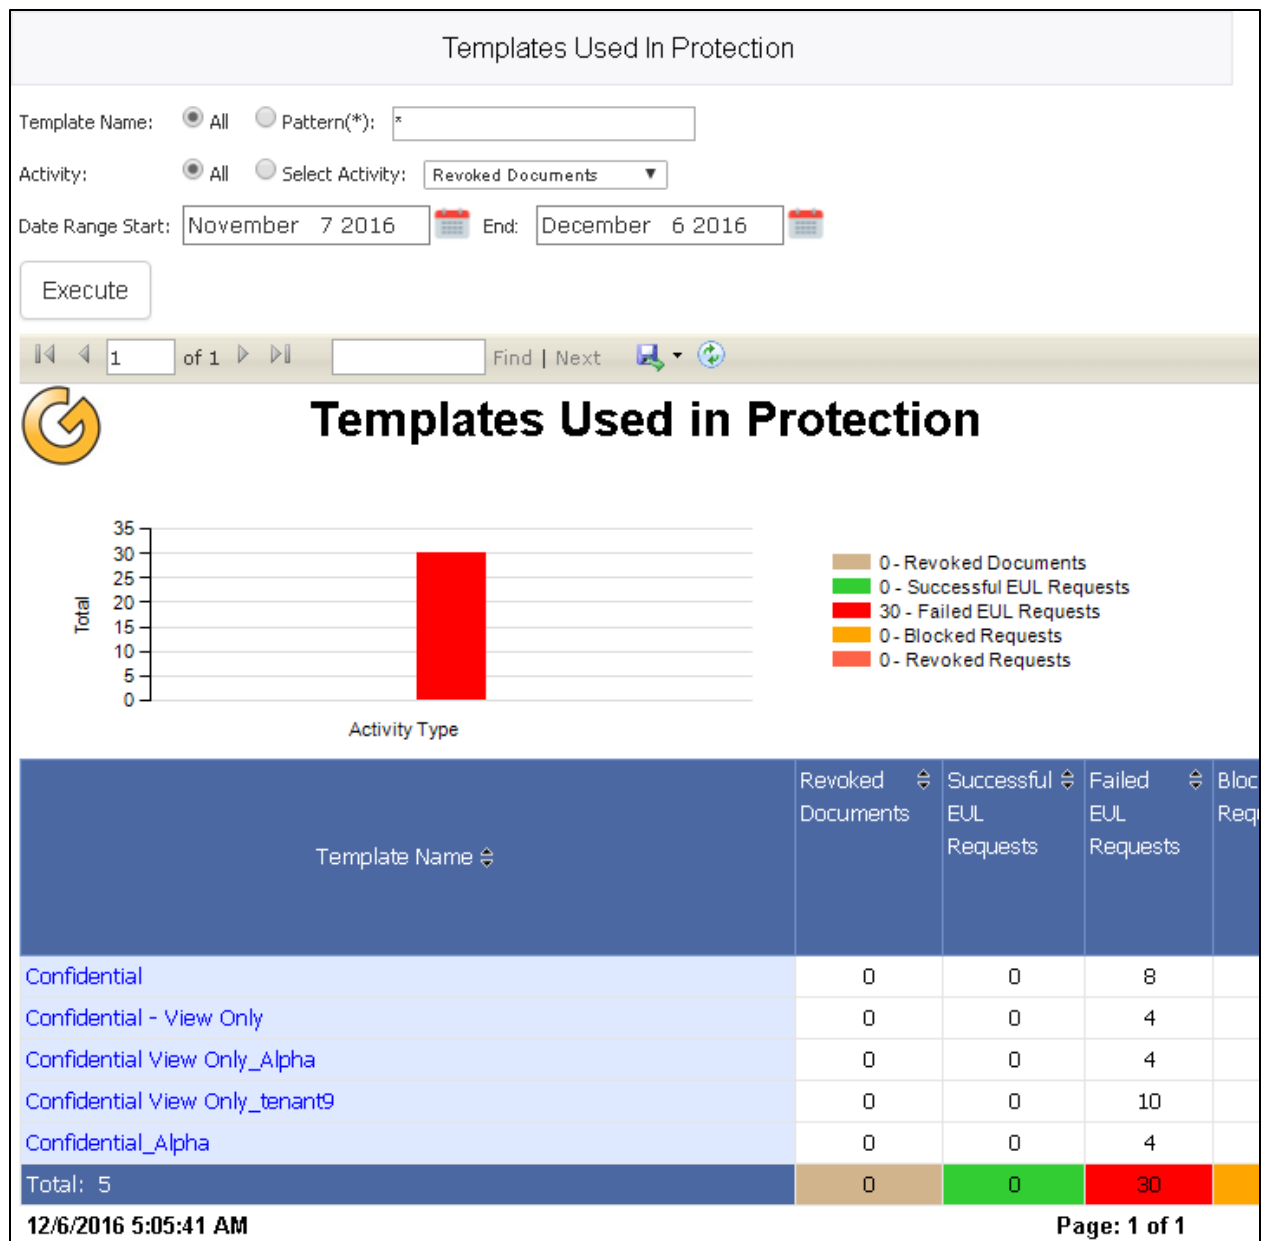

Run this report to view metrics on Policy Templates used by your organization such as what content was protected by each Template and further details broken out to: **Revoked Documents**, **Successful EUL Requests**, **Failed EUL Requests**, **Blocked Requests** and **Revoked Requests**.

Customize your report with the following options:

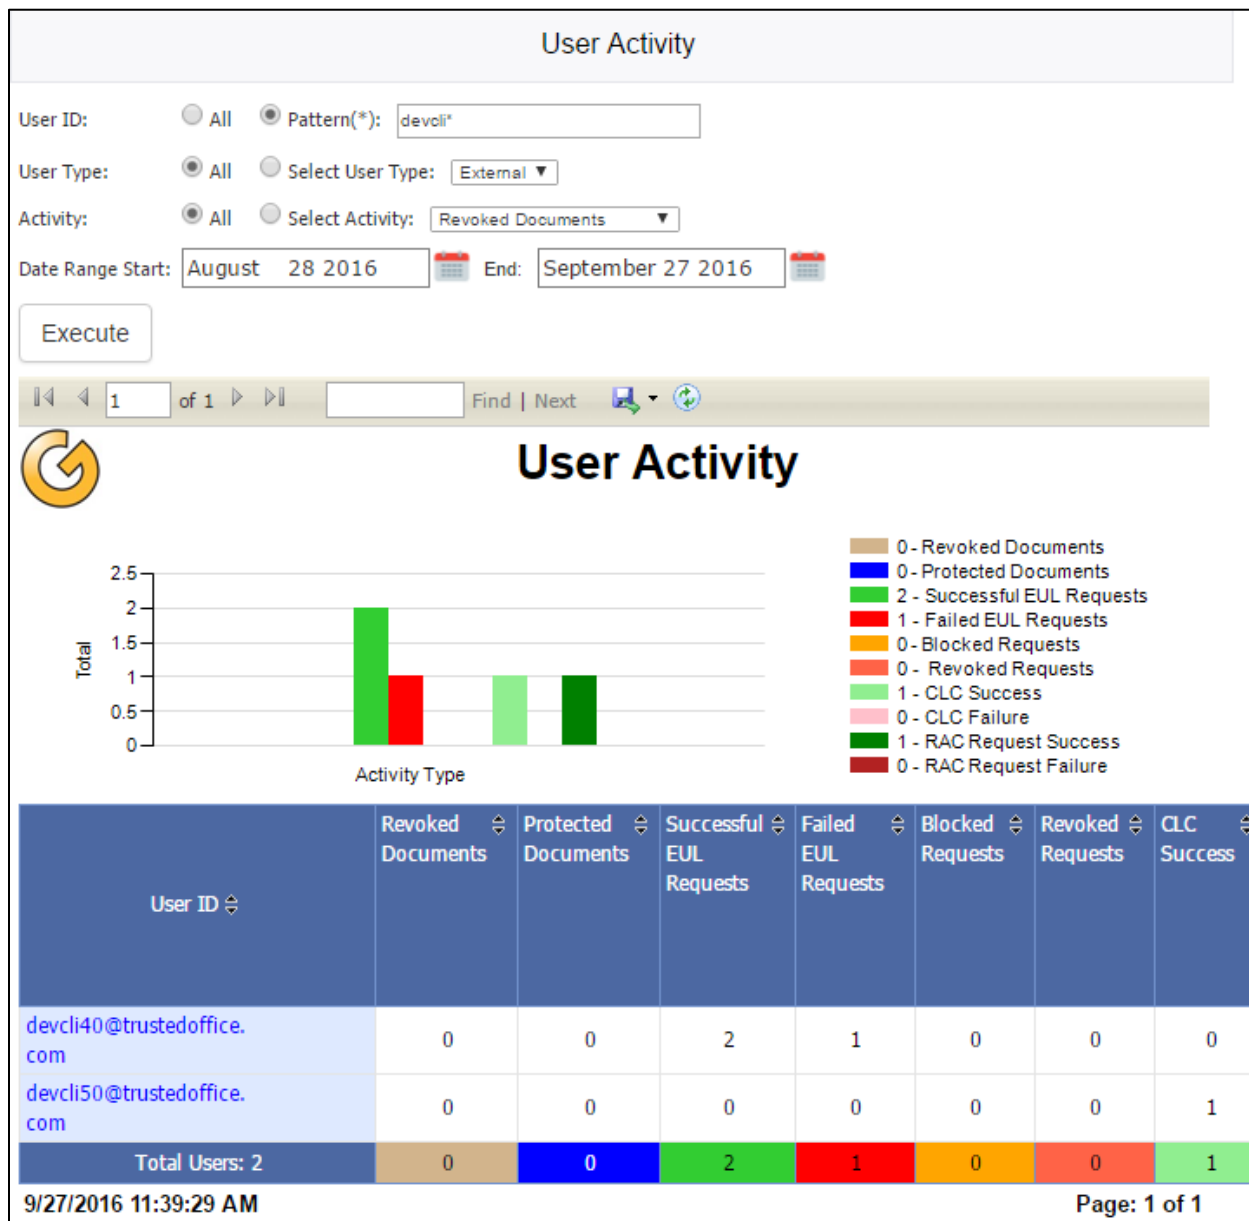

- **Template Name** – Choose a particular Template or similarly named templates by Pattern.
- **Activity** – Drill down to specific document activities such as **Revoked Documents**, **Successful EUL Requests**, **Failed EUL Requests**, **Blocked Requests** and **Revoked Requests**.
- **Date Range** – Configure a specific date range for the template activity.

Clicking on a **Template Name** will take you to the **Template Detail** report. This report displays all activity for that template by Document Name, Owner ID and the following activities: **Revoked Documents**, **Successful EUL Requests**, **Failed EUL Requests**, **Blocked Requests** and **Revoked Requests**.

User Activity Report

Use this report to view metrics by User such as what content was protected and further details by: **Revoked Documents, Protected Documents, Successful EUL Requests, Failed EUL Requests, Blocked Requests, Revoked Requests, CLC Success, CLC Failure, RAC Request Success and RAC Request Failure.**

Customize your report with the following:

- **User ID** – Select a particular User or a range of Users.
- **User Type** – Choose by External or Internal Users.
- **Activity** – Choose from **Revoked Documents, Successful EUL Requests, Failed EUL Requests, Blocked Requests** and **Revoked Requests**.

- **Date Range Start** – Select a date range for the report.

Note: Clicking on a User ID will take you to the [Detail User Activity](#) report for that User as shown previously on page 9.

Reporting - Assignment

Overview

Use these two reports to get a summary of Policy and Software Assignments:

1. **Policy Assignment** – This report returns the current Directory Structure with each respective Directory/User node's assigned Rights Management Policies.
2. **Software Assignment** – Receive a summary of all defined Software Types and their User Assignments.

Policy Assignment Report

Run this report to view the current Directory Structure with each respective Directory/User node's assigned Rights Management Policies.

Policy Assignment

Policy Name: ☒ All ☐ Pattern(*):

Policy Type: ☒ All ☐ Select Type: AppHook Apps

Assignee ID: ☒ All ☐ Pattern(*):

Assignee Type: ☒ All ☐ Select Assignee Type: Bound Community

Directory Path: ☒ All ☐ Pattern(*):

trustedoffice	Bound Community	Global/trustedoffice
Confidential View Print		Rights Template
Global	Unbound Community	Global
dhTOGTEPwatermark1		PDF Watermark
DHCloudUsers	Group	Global/trustedoffice/DHCloudUsers

Customize your report with the following:

- **Policy Name** – The name of the Policy to search.
- **Policy Type** – Choose from the following types of Policies: **AppHook Apps**, **Black List**, **Black List Exceptions**, **Content Classifications**, **Email Classification**, **File Folder Configuration**, **JDA Configuration**, **Local Email Templates**, **PDF Watermark**, **Revocation List**, **Rights Template** and **Trusted Applications**.
- **Assignee ID** – The UPN of the User assigned the Policy.
- **Assignee Type** – Choose from **Bound Community**, **Computer**, **Group**, **Unbound Community** or **User**.
- **Directory Path** – This can be customized to a specific Directory Path, usually starting with Global (the root).

Clicking on the  symbol to the left of the Policy Name will collapse the User list for that specific Policy below it. Conversely, clicking on the  symbol will expand the User list.

Note: If you click on a Policy Name in the resulting report, it will take you to the [Template Detail](#) report for that policy as previously displayed on page 11.

Software Assignment Report

This report displays Software Types and the Directory items they have been assigned to. Details returned include: **Software Type**, **Name**, **Type** and **Directory Path**.

Software Assignment

Customize your report with the following:

- **Software Type** – The type of the Software to search.
- **Assignee ID** – The UPN of the User assigned the Software.
- **Assignee Type** – The directory node type: **Bound Community**, **Group**, **Unbound Community** and **User**.
- **Directory Path** – This can be customized to a specific Directory Path, usually starting with Global (the root).

Reporting - Overwatch

Overview

Overwatch is located on the menu in GigaCloud Administration. Reports are divided into the following three types:

1. **System Activity** – displays ALL User Document activity by Overwatch Event type.
2. **User Documents** – displays specific User activity by Document name and by Event type: Protect, File Unprotect, Unauthorized Open, Changes Protection, Open, Revoke, Print and Screenshot.
3. **User Events** – provides a data rich report with Timestamp, Overwatch Event, User Name and Document Name.

System Activity

In the menu, go to **Reports > Overwatch > System Activity**.

This report displays ALL User Document activity by the following event types:

- **Protect** – files, email and attachments protected by Users.
- **File Unprotect** – files, email and attachments unprotected by Users.
- ***Unauthorized Open** – Users that attempted to open files, email and attachments without the proper permission.
- **Protection Changed** – protected content permissions that were changed by the owner or user with Full Control
- **Open** - files, email and attachments consumed (viewed) by authorized Users.
- **Revoke** - files, email and attachments that had content permissions removed.
- **Print** – protected files, email and attachments that were printed.
- ***Screenshot** – client screen captures of protected files, email and attachments by Users.

* Not reported by GigaTrust Desktop Client.

This report will give you a valuable real-time snapshot of your organization's AD RMS Protected content security. For instance, if you run the report and see a high number for Unauthorized Open, you may have a security breach and you can take the necessary steps to safeguard your company's intellectual property.

Choose a **Date Range** and click **Run**. The default Date Range is 1 month.

The results are displayed below by date/day.

User Documents

In the menu tree, go to **Reports** ➤ **Overwatch** ➤ **User Documents**. This report displays documents owned by the User and activity by Document name and the following event types:

- **Protect** – files, email and attachments protected by Users.
- **File Unprotect** – files, email and attachments unprotected by Users.
- ***Unauthorized Open** – Users that attempted to open files, email and attachments without the proper permission.
- **Changes Protection** – protected content permissions that were changed by the owner.
- **Open** - files, email and attachments consumed (viewed) by authorized Users.
- **Revoke** - files, email and attachments that had permissions for a User removed.
- **Print** – protected files, email and attachments that were printed.
- ***Screenshot** – device and desktop screen captures of protected files, email.

* Not reported by GigaTrust Desktop Client.

This report will provide a snapshot of a particular User's Document Activity while giving you the ability to get more detailed information about an Event.

In the **Owner Email** text box start typing the User's email address. The list will drop down matches as you type. Select the correct Email Address and the report will begin to load.

Page Total 2

Per Page:

Clicking on a column header will sort the table by that column. At the bottom, page back or forward, go to a specific page and/or select how many results are displayed per page: **10, 25, 50, 100** or **1000**.

Double-clicking a row will open the following **Overwatch Event Detail** window with more data:

This report displays ALL User events for this particular document.

Reporting - Security

Overview

GTEP provides a variety of valuable security reports including:

1. **Application Security** – This report lists Security Principals and their associated Application Rights within GTEP Administration
2. **Directory Security** – This report lists the current directory structure with Assigned Security Principals and their associated rights.
3. **Policy Security** – Run this report to return a summary of User assignments and the permissions provided to them by the owner.

Application Security Report

This report will show all Users that have access to GTEP and their respective permissions (True or False) for the different areas of GTEP including: **Access, Reports, Application Security, Audit Trail, Allow/Block Access, External (Managed) Communities, Application Settings, System** and **Document Revocation**.

Home > Reports > Security > Application Security

APPLICATION SECURITY [view application security in GigaCloud](#)

Filter

Security Principal ☒ All ☐ Enter security principal email

Run

1 of 3 Find | Next

Application Security

Permissions							Security Principal
Access	Reports	Application Security	Audit Trail	Allow/Block Access	External Communities	Application Settings	
True	False	False	False	False	False	False	adfs@gtcloud9.com
True	True	True	True	False	True	False	administrator@bigcompany.com
True	True	True	True	True	True	True	administrator@company3.com
True	False	False	False	False	False	False	administrator@gtcloud9.com
True	False	False	False	False	False	False	adrms@gtcloud9.com

Customize your report with the following:

- **Security Principal** – Search for All Users with access or search by a specific UPN or Pattern.

Directory Security Report

View current Directory Structure with Assigned Security Principals and their associated rights. The following security settings are returned either True or False by the specific User: **Read**, **Write**, **Security** and **Assign**.

Directory Security

Directory Name	Type	Directory Path	Read	Write	Security	Assign
Big Company	Bound Community	Global/Big Company				
administrator@bigcompany.com			True	True	True	True
HR	Unbound Community	Global/Big Company/HR				
administrator@bigcompany.com			True	True	True	True
Sales	Unbound Community	Global/Big Company/Sales				
administrator@bigcompany.com			True	True	True	True
Operations	Unbound Community	Global/Big Company/Operations				
administrator@bigcompany.com			True	True	True	True
HR Group@gtcloud9.com	Group	Global/Big Company/HR/HR Group@gtcloud9.com				

Customize your report with the following:

- **Security Principal** – Search for All Users or search by UPN or Pattern.

- **Directory Name** – Search for All Users with access or search by UPN or Pattern.
- **Directory Type** – Choose the specific type of Directory Object: **Bound Community**, **Computer**, **Group**, **Unbound Community** or **User**.
- **Directory Path** – Leave ALL selected or enter a specific directory path or search Pattern.

Policy Security Report

This report allows you to get a summary of User assignments and the permissions provided to them by the owner of the specific Rights Management Policy. The following permissions are returned with either **True** or **False** for that User: **Read, Write, Create, Assign, Security** and **Reporting**.

Total Policies: 5			Total Security Principals: 5					

3/1/2018 1:03:10 AM Page: 1 of 1

Customize your report with the following:

- **Security Principal** – Search for All Users or search by UPN or Pattern.
- **Policy Name** – The name of the Policy to search.

- **Policy Type** – Choose from the following types of Policies: **AppHook Apps, Black List, Black List Exceptions, Content Classifications, Email Classification, File Folder Configuration, JDA Configuration, Local Email Templates, PDF Watermark, Revocation List, Rights Template and Trusted Applications.**

Troubleshooting

Start by connecting to the GigaTrust Log Client. This will display real-time errors to assist in troubleshooting GTEP. For further troubleshooting assistance, use the [GTEP Troubleshooting Guide](#).

The GigaTrust Log Client will also give you real-time Reporting Events as they occur.
